H. W. JOHNS'

LIQUID

Coach Colors.

These enamels are prepared ready for use, of the best and most durable materials, and are especially intended for repairing carriages, wagons, carts, sleighs, buggies, etc. They are also adapted for use on mantles, furniture and any work where a high gloss finish is desired with one application. They can be easily applied, dry rapidly with a firm, hard gloss, and do not require to be either rubbed or varnished.

One quart is sufficient for an ordinary sized wagon.

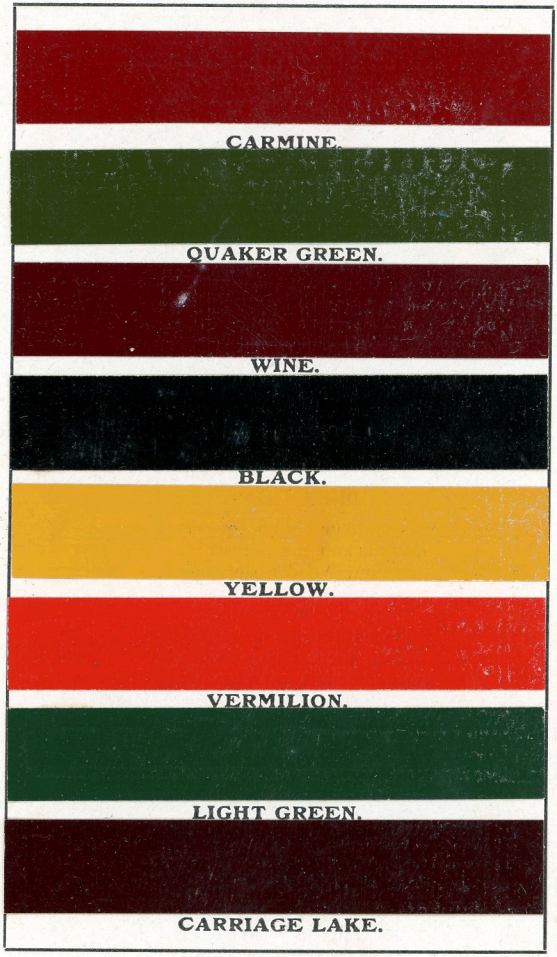

DIRECTIONS.

New work should first be thoroughly sandpapered, all dust removed, and the pores of the wood filled thoroughly with our Wood Filler, after which apply a flowing coat of the Coach Colors. Old painted wood-work should first be thoroughly cleaned; sandpaper rough places, and fill holes, cracks, etc., with putty. Touch up such spots and other bare places with a preliminary coat and after this is dry, apply an even coat to the entire surface.

When applying more than one coat, care should be taken that each coat is dry before applying the next.

Stir the liquid thoroughly before using, and apply with a flat "chisel" varnish brush; apply the paint in a warm, closed room, dampening the floor to prevent dust. At least 24 hours should be allowed for drying.

Should the material be found too thick, thin with a very little turpentine.
