FELLOWSHIP REPORTS INDEX

PLAINTIFF'S EXHIBIT
ATI-135

Progress Report #1 --- October 3, 1946

1. General Remarks

Progress Report #2 --- December 13, 1946

1. General Remarks

Progress Report #3 --- March 28, 1947

1. Fellowship Program Review
2. Abradoflex Description
3. X-ray and Spectrographic analyses of Chrysotile

Progress Report #4 --- June 19, 1947

1. General Remarks

Progress Report #5 --- September 25, 1947

1. Abrasion Resistance Studies
2. Constant Weight Investigations

Progress Report #6 --- December 5, 1947

1. Review of Test Methods, Techniques and Equipment used in A.T.I. Fellowship Laboratory.
2. Tabulation and Evaluation of Accumulated Test data.

Progress Report #7 --- April 8, 1948

1. Abrasion Resistance Tests
2. Hot Surface Tests
3. Constant Weight Determinations
4. Fundamental characteristics of Chrysotile

Report #8 --- June 17, 1948

1. Thermal Properties of Chrysotile

Report #9 --- September 23, 1948

1. Physical Tests on Asbestos Textiles
2. Flamability and Flame Propogation Studies.

Report #10--- December 10, 1948

1. Abradoflex Tests

ATI-000135_0001

Report #11--- April 7, 1949

1. Cotton Degradation and its Influence upon the Thermal Properties of Asbestos Textiles
2. Moisture Regain of Chrysotile by Desiccation.

Report #12--- June 16, 1949

1. Heat Aging Tests

Report #13--- September 16, 1949

1. Heat Aging Tests
2. Fiber Length Classification

Report #14--- December 8, 1949

1. Heat Aging Tests for Asbestos Textiles
2. Heat Aging Test Report with Reference to cloths containing a Predominance of Rayon in the organic portion.
3. Progress Report on Heat Aging Tests
4. Westinghouse Electric Corp. Test Methods.

Report--- The Asbestos Content of Asbestos Textiles--March 27, 1950

Report--- The Physical Properties of Some Asbestos Textiles---March 27, 1950

Report--- Abrasion Resistance Test for Asbestos Textiles--March 27, 1950

Report--- Tensile Strength Determinations--March 27, 1950

Report #15--- June 15, 1950

1. Pipe Covering Test
2. Heat Aging Test
3. Fire Resistant Finishes for Aircraft
4. Acid Degradation of the Organic Portions of Asbestos Textiles.

Report #16--- September 21, 1950

1. Pipe Covering Test
2. Temperature Resistance Tests

Report--- Abradoflex--Abrasion Resistance Tester--September 21, 1950

Report #17--- December 14, 1950

1. Pipe Covering Tests

Report--- Metallic Foil Clad Asbestos Textiles--April 12, 1951

Report--- Abradoflex--Abrasion Resistance Tester--April 12, 1951

Report--- A Method for Determining the Flame Propogation Characteristics of Asbestos Textiles--April 12, 1951

Report #18--- June 14, 1951

1. General Remarks

Report #19--- October 11, 1951

1. General Remarks

Report #20--- December 6, 1951

1. Heat Aging Tests
2. Aluminized Cloths
3. Temperature Resistance of Asbestos Textiles

Report--- Temperature Limits for Asbestos Textiles--March 27, 1952

Report #21--- June 19, 1952

1. Heat Aging Test
2. Aluminum Clad Asbestos Textiles
3. Asbestos Tape as a Pipe Lagging Material
4. Glass-Asbestos Combination Textiles

Report #22--- October 9, 1952

1. General Remarks

Report--- The Strength Characteristics of Asbestos Textiles at Elevated Temperatures--October 1, 1952

Report--- Heat Aging Tests--October 1, 1952

Report--- Heat Treatment of Asbestos Textiles at 200°F-October 1, 1952

Report--- The Determination of Asbestos--Glass Ratio by Specific Gravity Method--October 1, 1952

Report #23--- December 11, 1952

1. Elevated Temperature Strength Characteristics
2. Glass-Asbestos Content of Asbestos Textiles
3. Significance of Chemically Combined Iron in Chrysotile

Report #24--- March 12, 1953

1. Physical Tests on Asbestos Textiles a) Steam, water and acid.
2. Westinghouse Heat Aging Test
3. Significance of Chemically Combined Iron in Chrysotile

Berry –

The "fellowship" or technical research paid for by ATI members at Rutgers University. Thousands of $ spent on this crap to find more uses for asbestos and to check performance characteristics. products. Stands in stark contrast to health investigation. where the expenditure was mostly
