St. Elizabeth Hospital

PATHOLOGICAL REPORT

S-69-510

DATE 2-5-69 ROOM 535

NAME Borel, Mr. Clarence DR. M. M. Self

SPECIMEN SOURCE: Pleural Fluid

GROSS DESCRIPTION:

MICROSECTION: Scattered mesothelial cells and macrophages are found. Within the cell block there are several clumps of cells which are atypical. Some of these form rosettes but these could be papillary projections of mesothelium from the pleura. A few other clumps of cells are loosely associated with each other and these have more atypical nuclei. They must be considered as suspicious.

DIAGNOSIS: Chest Fluid With Atypical Cells, Possibly Malignant

PATHOLOGIST

LAS—1
