Subject: NIOSH List of Trade Name Products
Which Contain Regulated Carcinogens

Elvis Green recently requested that I obtain the NIOSH listing of trade name products which contain regulated carcinogens. NIOSH had compiled the list from their National Occupational Health Survey and had provided the list to several labor unions.

I was able to obtain a partial listing of the trade name compounds from Mr. George Pettigrew (Regional Consultant for OSHA). The remainder of the list contained proprietary compounds that could not be released at this time.

As you can see, most of the compounds contain asbestos. If we are using any of these compounds, our handling procedures should be reviewed.

AUG 1977
RECEIVED
DHEW/PHS
REGION VI

This is in response to your request for the list of trade-name products NIOSH has which contain one or more of the 16 carcinogens currently regulated by the Occupational Safety and Health Administration. This information comes from our National Occupational Health Survey. The total number of these products is 411; however, the composition of approximately one-third (146) has been designated as trade secret by the manufacturer, and we cannot release their names. (NIOSH has begun the formal process of questioning that trade secret designation.)

There are, therefore, only 265 products identified during our survey as containing an OSHA-regulated carcinogen for which the manufacturer did not give a trade secret designation. I am enclosing a computer print-out of that list of products.

I should remind you that the enclosed list contains information on the composition of the trade name products between 1972 and 1974. We do not know whether these products are still being produced and whether their composition has changed.
