CAUTION LABELS INDUSTRIAL INSULATION PRODUCTS

We had revised the printing layout on most of our high temperature pipe and block insulations, as well as cement to show a caution label on the inhalation of Asbestos.

This was decided upon here, and all our products will have this label and if you do not want or need it in Canada, you will either have to have all special cartons and bags made available at your expense, and each order will have to be made to order or else you may merely cover up the label when it arrives at your Canadian Plant before it is re-shipped to a customer.
