Dr. A. N. Pauly
Johns-Manville Corporation
Manville, New Jersey

Dear Doctor Pauly:

I am very apologetic for being so slow in answering your letter of May 15th, but, as usual, I have been away from my office a great deal and have not had the opportunity to sit down and go over in detail the films which you kindly sent me. Incidentally, I am very grateful to you for sending me these films and I shall return them promptly.

I would not be so brash as to say that I can give you a correct interpretation of all the films that you sent me. In fact, I think that some of these films cannot be interpreted by anybody on a purely X-ray basis, but I will tell you how they look to me.

Name	Film No.	Interpretation
Ethel Balogh	831	Mostly asbestosis plus something else, possibly diatomaceous earth.
Stephen Begane	1515	General pneumoconiosis involving silica and diatomaceous earth.
Louis Bellomo	19	Asbestosis
Charles N. Calabrese	6221	Far advanced pneumoconiosis, probably involving diatomaceous earth, asbestos and silica.
Anna Luteran	857	Asbestosis.
James Marsicano	177	Asbestosis.
Nick Mecca	310	Asbestosis.
John Nemeth	3739	Asbestosis.
Mike Petronick	1454	Here again I do not know what to say. It may be silicosis or possibly anthraco-silicosis. I would like to have a copy o a recent film of this man for my collecti together with a short statement of his wo history.

Name	Film No.	Interpretation
Justyna Prychka	418	Asbestosis.
Norman Robinson	5730	All I can give you here is a question mark.
Mary Sabol	2207	Asbestosis.
Peter Shurin	1032	Pneumoconiosis, possibly tuberculosis in the right apex. I can't give you anymore than that.
Anna Stryker	409	Probable early asbestosis.
John Wislosky	1509	Here again, as in the case of Petronick, we have a little of everything—coal, silica, diatomaceous earth.
John Wohar	3258	Beginning asbestosis.

If you can let me have films of the two cases I mentioned I will be very grateful.

With best regards, I am,

Sincerely yours,

A.J. Lanza, M.D.
