H. F. Janson (Dept Supervisor - mill)

Alexandre Bourassa - 4020

A recent physical examination of this man has convinced me that we should transfer this man to a non-dusty operation. He is only 35 years of age but has had 20 years' dust exposure. He is not sick at the moment, but, in my opinion, he would benefit from a non-dusty job.

Should he continue to work in the dust much longer, I feel that we might have another case with " a typical X-ray film and typical physical findings" of abbestoses.
