Manville Factory

EMPLOYEES' PHYSICAL EXAMINATIONS

Dear Mr.Begert:

I am writing concerning the recapitulation of the survey throughout the plant which we have recently finished. I have examined all the employees in the plant and a Wassermann test and a urine analysis has been made on each one. Besides this, a stereoscopic X-Ray has been made. I am submitting the report of this survey for your scrutiny.

I might say in explanation that a great many of the people who have "Asbestosis" have been marked "No Progress". This is because of the fact that the original X-Ray made in 1932 was a single film, and so very little comparison can be made between that and the modern stereoscopic Roentgenogram.

All cases that show any abnormality of the lung, either from a fibrosis standpoint or from an infectious standpoint, will be reviewed again within six months of date.

Very truly yours,

Lewis C.Fritts, M.D.
