TELETYPE MESSAGE

Dr. K. W. Smith
North Bay Plant - Need for arrival Oct. 11.

T. D.

Date 10/10/60

Order No. and Material Transmitting urgent request of Art Janssen, we need data for warning message on bags of J-Spray, J-M's asbestos spray-on fireproofing material. Materials are 23% 5R fiber; remainder mineral wool, bentonite and sodium nitrite, repeat nitrite. Material applied by outside contractors through spraying machine similar to rock wool blowing machine used for home insulation except fine water spray impinges on the material as it emerges from nozzle causing wetted mass which sticks on ceilings and steel work to be fireproofed. Some dusting results through incomplete mixing. Please wire your comments T.D. with copy to A. L. Fisk, GRQ.
