Hazardous Product Labelling
Industrial Insulations Products

I have reviewed your letter and attachment dated August 5, 1969 presenting the problem of product labelling in your division.

I believe there is a basic decision to be made as to type of products that require labelling. I propose the following guideline.

> Only products that during handling, fabrication and/or installation generate asbestos fiber or crystalline silica containing dusts in potentially harmful quantities shall be labelled.

If this guideline is followed, then products such as

Flexboard	Colorlith
Ebony	Chalkboard
Transite	Marinite
Dry Cements	85 % Magnesia
Thermobestos (presently labelled)	

would be labelled.

Products such as

Wet Cements	Ceraform
Albaseal	Duxseal
Navaseal	Insullcote
Fire Brick	

would not be labelled.

Products such as

Millboard	Asbestos Paper
Thermomix	Min-K
Asbestos Felt	

are in a "grey" area, and would need individual review.

May I please have comments from you and copyholders on this approach.
