Use of Protective Equipment

In certain areas of our plants where noise levels or dust concentration dictate, operating personnel have been provided with ear muffs or respirators.

All persons entering such areas are to be provided with suitable respirators or ear muffs.

In order to carry out this ruling, it will be necessary that in addition to having respirators and ear muffs available for all supervisors, maintenance personnel and other plant people, a supply of protective devices must be available for all plant visitors whether from Johns-Manville or outside the company.
