Subject: SMOKING BAN

At a Plant Review in Belgium last week, we discussed the feasibility of installing a "No Smoking" ban in our asbestos cement plants at Mol and Ghent.

Generally, the response from the management group was very favorable but they pointed out the best way to reduce smoking and hopefully attain a complete ban would be to enlist the aid of the unions.

Up to now, they have no information except the press releases we have made indicating that people who contract lung cancer "always" are smokers.

We would very much appreciate more detailed information from you or Dr. Paul so that a presentation could be put together and presented to the union. Would you please send this information to George Jacobs at Mol.
