A. R. Girardi

Nashua Appropriation 012-IR-1090 Rev.
Revision to Press Department Dust Collector
$87,950
Your letter - 5/13/60

The conditions described in this appropriation have been and currently are producing pulmonary involvement. It is, therefore, essential from both health and cost control standpoints that effective controls be provided.

Although under the "discussion" paragraphs, page 2, there is indication of the number of employees exposed, the presentation does not indicate the number of disability or involvement cases currently attributable to exposure in these areas. I believe the justification for this expenditure would be better developed if such information was included and an estimate of compensation costs and liability potential made.

Dr. Smith will be at Nashua plant next week to make a complete review of the x-rays. The above suggested data could be accurately obtained from this review.

I recommend that approval be given to this appropriation request.

H. M. Jackson
