R. B. Frandsen - Waukegan

Threshold Limit Values
Your Letter September 18, 1959

It is quite in order to establish the applicable threshold limit on the basis of estimating contaminant in the proportion of the substance in the product raw material mix.

Your application of this principle in the second paragraph to the asbestos cement products is quite correct, although there might be certain spots in the manufacturing operation where the exposure would not be mixed, but a single substance.

I plan to be out in Waukegan the week of October 19 and will be glad to review this subject further with you at that time.

H. M. Jackson
