H. M. Jackson, Esq.

Respirators

I believe Mr. de Wilde brought you up-to-date on our respirator program. However, the following will give you an idea of our proposed procedure.

[redacted]

A respirator cleaning unit has been built in the new mill designed to combine the unit already in operation in the basement. This unit is also to be transferred to this room when the new mill starts operating.

This room will service the entire location. Enclosed racks are provided in this room for mill employees and each dried and respirators in paper bags will be placed in the [redacted] paper bags.

Respirators for other departments will be sent to the department and in the case of larger departments such as the Millwrights, a similar unit set up will be used.

As pointed out by Mr. de Wilde, [redacted] will result very strongly [redacted] for employees in the [redacted] respirators in under the control of a [redacted] arise.

It was agreed in the [redacted] that a suitable person or persons [redacted] work. Since light duty employees [redacted] do not foresee any problem.
