Subject: MARTIN SAUNDER'S COMMENTS ON ENVIRONMENTAL CONTROL TESTING METHODS - JUNE 17,. 1975 RADIO - 8:25 A.M.

The president of the U.S.W.A., Local 7713 in Baie Verte says he is not satisfied that the testing procedures of the Company to assure that asbestos dust levels are safe. Martin Saunders says the present system is inadequate, and they hope to institute a new program later on this month. CK Radio spoke with Martin Saunders.

"We're not satisfied with the Company procedure. We, we, we feel that they should be, the, ah, that probably something should be done should be on the individual himself. What they are doing now they go around like they have a guy that goes around to certain areas and takes tests. He only goes there for a few minutes and he takes, takes the tests and they, they averages it out I guess, but ah, what we would like to see, what we want, we are hoping to get a program going later on this month ah, to have set up the individual, the, the guy that works in the dust that the monitoring, ah, ah, device be put on the individual himself, so that you get a true reading of exactly what he is exposed to.".
