October 31, 1950

Dr. A. J. Vorwald, Director
The Saranac Laboratory
P. O. Box 62
Saranac Lake, New York

[redacted]

Dear Art:

Mr. Eberhart and I have chatted with a great deal of interest the Proposal dated October 6, and his letter to you of October 30 covered several points he had after he had first read the Proposal.

Here are a few additional questions, some of which were touched on by Mr. Eberhart:

(1) [redacted]

(2) [redacted]

(a) [redacted]

(b) [redacted]

(d) If discontinuation of employment neither in a hazard, with known by a medical problem in the years that you are ... ing these cases are diagnosed, [redacted] of the plant, these probably would not be [redacted], but we really don't [redacted] this. Perhaps you are considering doing this by discontinuation method.

You raised a question about making a survey test on a part of this and while we have not no problem in this connection, it would seem also to // include this at this time.

It seems to me, too, more desirable to use a room rather than a cabinet for the reasons that you gave.

We should like to have some others here study this Proposal and we shall then get in touch with you. We realize this program could be started soon, so we intend to write you as promptly as possible. In the meantime, would you give us information on the points Dr. Eisenhart raised, as well as the ones raised above.

With very best wishes,

Yours sincerely,

S. P. Rockwell
