Mr. Charles A. Parish
National Sanitation Foundation Testing Laboratory, Inc.
University of Michigan
Ann Arbor, Michigan

Dear Mr. Parish:

Dr. K. W. Smith of our company has replied to your question as to whether or not Marinite 36 is toxic. I believe the best way to describe this material to you is to refer you to the enclosed brochure on the material. You will note that it is unique in that it is both structural and an insulating material.

It has been extensively used in the construction of ovens, driers and other process equipment requiring a backing for the prevention and control of heat. If you will refer to page 4, you will note that Marinite has been used in the construction of a similar oven.

If there are any questions which you have after reviewing the attached brochure, please do not hesitate to write to me regarding them.

Yours very truly,

W. G. Hoffman
Product Manager
