Industrial Hygiene - Lompoc

When you, "Doc" Cummins, and I were on the Coast early last fall, Lompoc was asked to give us a list showing the individuals whose physical examinations disclosed very marked changes and whose cases were relatively well advanced.

This method has proven effective at other locations. Some spread sheets of the way the information is shown at one of the other locations were left for them to follow as a guide in setting up the information.

Lompoc has not yet had time to prepare this, though Mr. Legge's letter to me of July 20 said the work would be carried on on this project and the information sent to us as soon as possible.

From the examination cards that were sent in some time ago and which Hugh Jackson since sent back to Lompoc, it would appear that there might not be a great many cases, possibly 30 or 40.

My letter to Mr. Legge of July 28, with copies to you and others, subject, "Industrial Hygiene - Lompoc," was on this subject.

This memo is just to suggest that you review this at Lompoc when you are out there to see when they now think the information will be available. I feel sure this will be helpful to us in getting a picture of the situation, as it has been at other locations.
