CAUTION LABEL
Yours April 29, 1968.

You will recall that the specific wording of a caution label was to be approved by each company of the Asbestos Group approval then, the enquiries were to be, whether they would or would not be putting the label on the bags.

Whether all or none of the other companies are to put the approved label on the bags will do so, when, depends on first getting the above two points cleared.

As to a statement to our customers, I think we have to say that a possible hazard has been recognized and that we are taking the obvious action required under the circumstances.

Jute bags should present no problem. We will put the same label on the jute.

Your point (c) has to a degree been answered. May be they will, may be they won't but we are.

J.R.M. Hutcheson
