Cautionary Labels for J-Spray Bags

This will confirm our telephone conversation this morning. I understand that J. P. Syme has ruled as a matter of Company policy that we not place any cautionary labels on the bags which contain our J-Spray fiber mixture. We are, however, to issue the necessary caution as to dust hazard in the literature which accompanies this product.

I understand that this decision is based on the fact that the hazard in handling J-Spray is regarded as no greater than that involved in handling #302 cement or other asbestos fibers and fiber mixtures which we manufacture and sell.

I am asking A. H. Jenssen by copy of this letter to let you see the instructions which are issued to our contractors and customers with respect to the necessary precautions to avoid dust hazard so that you may pass on their suitability.

J. S. Parkinson
