NOTED

he following is quoted from a report dated April 15, eceived from our New York District:

(Type 5)

This customer has reported that one of the girls handling Quinterra in their plant has contracted a skin rash and they are wondering if the rash could have been caused by either the Asbestos Paper itself or the saturant."

o the best of my knowledge there is nothing harmful r toxic in Type 5 Quinterra. Of course, with all ese various allergies which have become so prominent the medical profession during recent years, anything an happen. I shall appreciate and await with interest our comments regarding the above quotation. After eceiving them, I shall consult with Mr. Vandiver Brown efore advising the District as these matters may become real problems.
