Rules & Regulations Relating to Labelling
in the Use, Handling and Storage of sub-
stances Harmful to the Health & Safety
of Employees
3/6

We have read and discussed your comment regarding the labelling of asbestos for shipment into the State of Illinois with other producers interested.

Before proceeding with the troublesome task of complying with these regulations, we would like to be sure :-

That we must label our bags.

That "Asbestos" is specifically referred to in the regulation.

That a penalty exists if we fail to comply.

What other states have similar requirements.

What we are really after is a decision that it is compulsory to do the labelling job as a Canadian producer, and that there is no other way out.

Can you help us further in this direction?
