L. Hemerda, Manville

Arthur Freed

You will recall that you obtained some tissue from Dr. Livernose and sent it to Dr. Cross in Pittsburgh. On my recent trip to the coast, I stopped in Pittsburgh and discussed the case with Dr. Cross. After countless hours of painstaking search, he could find no evidence of asbestos bodies or asbestotic fibrosis. This is quite strange for I understand that Mr. Freed worked in our Textile Department for approximately 26 years. I wonder if you could have someone review all of your records and write up a meticulous work history. It does not seem possible that a man could work that length of time in our Textile Department without some evidence of asbestosis.

Kenneth W. Smith, M.D.
