J. P. Woodard - General Headquarters

Manville Industrial Hygiene Cases

It was not my understanding that Dr. Pauly would conduct an annual x-ray program in so far as the 84 cases on our list are concerned. He did agree to cover such cases within a 2 year period making, of course, a few exceptions where deemed necessary.

Dr. Pauly has pointed out to me that the president of the union once said, "I don't have to worry because they don't call me in for special films."

We have added a few names to the list and will continue to do so as the regular re-examination program progresses.

There is no special project on the 84 cases listed, and while the doctor does not believe there should be such a program, he has advised that he will change his mind if pushed on this score.
