Health Hazard Caution Warning Labels

Caution warnings are to be applied to certain packages and products that are sold by IID and that contain asbestos fiber and free crystalline silica. Caution warnings now in existence on some printed cartons and bags are to be revised. New caution labels are to be affixed to unprinted cartons and bags and in some instances to the product itself where health hazards may exist.

The new caution warnings have been developed and have Division, Environmental Control, and Industrial Relations and Legal Department approval.

At such time as the Corporate label revision program is put into effect in IID, the new caution warnings will be included in the revised printed product labels. Until this is done, the caution label must be a separate label.

The attached sheets show the layout of the labels being used and a listing of those products which will carry such warning labels.

All products will carry label L-4955 except those preceeded with an asterisk (*), which will use label L-4956.
