Kenneth W. Smith, M.D. GHQ Box 91

U.S.P.H.S. Survey, Lompoc
Your letter November 2 1953

Attached for your information is a copy of a letter dated Oct. 27, 1953 from Dr. W. Clark Cooper, Public Health Service, Occupational Health Field Headquarters, Cincinnati 2, Ohio.

Dr. Anderson, Mr. Newcomb and I agree that these tests should be made as part of this study.

It would save us time and expense if it could be arranged for us to obtain results of their tests. This is important in view of our program for doing routine gastrics in order to avoid as much as possible, certain employees being called upon to have this test done twice within a relatively short time. We believe that some employees will object to this.

Please refer to Dr. Anderson's comments regarding this subject, at the end of his letter dated Nov. 3, 1953.

We will be glad to continue to cooperate with the USPHS,and the State, in connection with this additional study; but in view of Dr. Anderson's comments I would like to have further comments and advice from you, before I answer Dr. Cooper's letter.
