1971

Marine Products were Shipped c these Hazard labels to Hopeman Bros. —

- Hopeman was aware of the label situation —
- When Panels were received - they ran into trouble taking them off the Marinite panels - and have claimed on a 2. & S. report it took up to 10 minutes (8-10) to remove labels - using a putty knife - & final hand sanding — using a hot iron - which drove the contact of the label into the Marinite - there fore requested no more labeles - the 2. & S is still pending —

- We met c the lawyers & Lod approved the use of a red-ink-rubber stamp application of the same wordage of the label. This is currently being done on Marine Panels from Billerica. —

- AVM Corp. heard of this problem & requested same treatment. - & threatened to cancel their ± 4000 sheet Marinite order -

This label is being used on Marine Panels from Nashua only. (Marine Veneer.) - applied to the back of panels —
