Transite Gas Vent Cement Labels
Ring-Tite Lubricant

This will confirm the conclusions decided upon during our meeting of last week.

All Gas Vent Cement can labels (L-1692 to L-1698 inclusive) are being returned for imprinting of the following:

CAUTION — This product contains material which may be toxic when taken internally. Avoid breathing dust.

Future printings will, of course, include this message as a part of the regular copy.

In addition, all future labels for Ring-Tite Lubricant will include the words:

CAUTION — This material has characteristics similar to those of strong soap. Prolonged contact with the skin may cause irritation.
