Subject: ASBESTOS LABELING - INTERNATIONAL

12-3307

At the Asbestos Environmental Committee Meeting held June 14, 1974, the following facts came to light again:

1. J-M is currently in the process of securing bags with labels for use in international shipments. Our information is that Philip-Carey has been labeling since late 1968 for international shipments of fiber and that J-M, Bell, Lake, and Asbestos Corporation are starting to do so. This relates only to fiber. Noel Hendry will provide documentation to us when the labeling actually begins.

2. With respect to products containing asbestos, no labeling is currently being done on international shipments by any company.

As we have previously discussed, I believe it is essential for us to again review this posture, particularly with respect to item number 2 above. I find it indefensible to label products in the United States and not label them internationally.
