Shampaine Company - St. Louis, Mo.
Colorlith

E. E. WILLIAMS

I am attaching a copy of a letter received from R. V. Lohse concerning the health hazards of Colorlith dust. Would you kindly comment on this problem to R. V. Lohse.

For your information, Colorlith is really steam cured transite (asbestos fiber, Portland cement, silica) with a small amount of pigment (carbon black, burnt umber, or chrome green depending on the color).

S. E. Williams
