DUST COLLECTING EQUIPMENT &
PROTECTING EMPLOYEES
Your letters Dec. 20, 1932

Nothing has been done regarding dust collecting equipment or protecting employees from dust conditions at this location. The dust problem here is not a serious one and we felt that we would prefer to have Mr. Bontemps opinion on this subject before submitting any plans so have just let the matter ride until his visit to the coast.

On one of Mr. Crowell's visits here, we had some discussion relative to having the company doctor at Lompoc come down here to make a physical examination of each employee. However, we believe that we can have a local doctor make these examinations for approximately the same amount as it would cost to bring the doctor down from Lompoc. Inasmuch as we have had so little sickness among employees and as new employees are being hired, this is another matter which has been held in abeyance. However, if you wish this matter to be taken care of now, please advise and we will obtain a price to submit to you for approval.
