Subject: OSHA LETTER NO. 26
USE OF BROOMS AND ASBESTOS-CONTAINING WASTE

As you may recall, a number of years ago our then President, Mr. Clint Burnett, issued a notice which in effect eliminated the use of brooms for sweeping where asbestos-containing waste was present.

Several years later, the Federal government, when they enacted the emergency asbestos standard, included a federal prohibition on the use of brooms for sweeping asbestos-containing waste.

In OSHA Letter No. 7, C. L. Sheckler continued the prohibition on the use of brooms in these circumstances. As we know, the Federal government in its final asbestos standard did strike that ban on the use of brooms from the new asbestos regulations.

It is our feeling that in spite of the relaxation of the Federal ban, this is one area where we at J-M are going to have to do better than the Federal regulations. As we also know, the use of brooms in the sweeping of asbestos-containing waste can and usually does produce potentially high dust counts. Some plants are very effectively using vacuum cleaners for this type of housekeeping. The larger chips such as present at a pipe lathe can be wet collected by use of a squeegee or grain scoop. These methods of collection may take a slightly longer amount of time, but they do eliminate the potential hazard.

The use of brooms to remove asbestos-containing waste should immediately be superseded by an alternate system (preferably vacuum) so as to eliminate this clearly controllable source of contamination.
