CAUTION LABELS INDUSTRIAL INSULATION PRODUCTS
YOUR LETTER JANUARY 29

We have been assured by Dr. K.W. Smith that it is not necessary to use the caution label in Canada and, therefore, we obviously do not want it on any of our cartons.

As you know, we import a large quantity of Thermobestos from Manville and, to hold costs to a minimum, we reship out of Toronto Plant in the Manville cartons. I discussed this with S. Bonet by telephone and he informed me that it would be no problem to remove the printed caution label by sanding. He was to follow this procedure effective January 13 for new shipments but cartons loaded or in transit would have the label removed at Toronto.

We are reluctant to cover over the label because of the possibility of having the protective covering removed on the job. Dr. Smith is in complete agreement.

I have been assured by the Fiber Division that mine cements shipped in Canada will not carry the label. This leaves only Superex Pipe Covering imported from Waukegan. Since our volume is very small, less than $5,000. per year, it would be appreciated if Waukegan Plant would remove the marking by sanding or some other means, on cartons being shipped into Canada.
