Effect of Dust Exhaust on Surrounding Property
No Agua and Antonito

Our insurance people have been advised by Travelers that unless we installed dust collection equipment at both the mill and Antonito operations they would not extend to us the same coverage against damage to surrounding property that we enjoy at other plant locations.

In order to evaluate the situation will you please advise:

1- The radius of the circle around each location which you would expect might be affected by wind blown dust emanating from our operations at the centers of the two circles (mill and loading station at Antonito).

2- Ownership of the property within the area of the circles with particular reference to any grazing or agriculture lands that might be affected near the mill and Antonito.

3- Advise particularly if there are any residences within the areas of influence and also whether any part of the town of Antonito proper comes within the area of influence of the loading station.
