Subject: INDUSTRIAL HYGIENE, A HANDBOOK OF HYGIENE AND TOXICOLOGY FOR ENGINEERS AND PLANT MANAGERS

Written by Laurence B. Chenoweth, M.D., and Willard Machle, M.D., and published by F. S. Crofts & Co., New York, in 1938, this textbook is available in the Boston Collection at C.U. Medical Library.

Chapter XI concerns dust diseases, but it mostly entails a discussion of silicosis. There is only a brief mention of asbestosis:

> "Asbestosis is caused by the breathing of fine particles of asbestos dust. In this disease not only is there a heavy deposit of the asbestos dust in the lungs but a general lung fibrosis follows and disability is marked."
