Bridgeport, Conn.
Sept. 27, 1937

Mr. Vandiver Brown, General Attorney
Johns-Manville Corporation
22 East 40th St.
New York City

My dear Mr. Brown:

I am enclosing copy of a letter received from Dr. Chas. E. Hyde, who is the physician for the DuPont's Fairfield factory. I am also sending a copy of the letter to Dr. Gardner.

I saw Dr. Gardner this summer at Lake Placid, and he stated he was very much interested in the results he had obtained, but, of course, it was too early to tell anything definite, but he does think the outlook is somewhat promising.

He made one remark when I asked him to obtain more information and advise you, and that was that the Harvard College Laboratory had sent him an asbestos sample which upon injection caused immediate death of the animals. This was a little bit strange. He did not know exactly where this sample came from, and I asked him to endeavor to find out. I expect in a few weeks, we may have some information as to this sample, and as soon as received, I will advise you promptly.

Very truly yours,

SS:G

President
