EXTENDED ASBESTOS MINING IN SOVJET

In spite of the fact that many countries try to limit the use of Asbestos due to health risks connected with flying asbestos fibre Sovjet are now extending their asbestos mining.

Unfortunately no substitute has yet been found. Consequently the demand has been increased and the supply is getting scarce. Therefore the world market prices are rising.

Sovjet, already having the largest asbestos deposits, have now found more asbestos in a village in the Ural Mountains.

It is also mentioned in the article that Sovjet are responsible for 2/3 of the investment required. The remaining money has to be raised by Bulgaria, Czechoslovakia, East Germany, Hungary and Rumania.
