r. Arthur J. Vorwald, Director
he Saranac Laboratory
aranac Lake, New York

ear Art:

Some time ago we mentioned to you that our Kaylo Division wants to ather together in brochure form material on the health aspects of Kaylo ust, and wants to consider the possibility of publishing some of your xperimental findings.

As we recall it, you mentioned during the visit that Dr. Shook and made to Saranac last July that the animal experiments were all com- eted (and no new ones need be started) and that the results of the veral years' program would be written up in final report form. Could u let us know how this project stands?

Could you also let us know how we stand on the finances? Our ac- unting department reports that they have paid two invoices this year— e in January for $1250 and one in May for $1250.

We still feel that before this work can be finally completed, it uld be desirable for one of your engineers to visit our Sayreville Lant and, among other things, take some gross air samples for compo- tion analysis. Any time such a trip can be worked into your schedule onveniently, let us know.

One more point—you mentioned last July that all the asbestos work rried on through the years at Saranac was being written up and would e published. Has this been done yet?

Best wishes to you and Mrs. Vorwald for a merry Christmas—with ts of snow in the Adirondack hills—and a happy New Year.

Sincerely yours,

W. G. Hazard
