Full Name Cook Paint & Varnish 1400 Jasper **Address** N. Kansas City, Mo 64116 **Mfrs. of** Polyesters	**Interviewed** Sam Yankee, Production Bill Keller, Factory Supt. Mike Weber, R&D Al Conway, Sales Mgr. Bob Liepsner, V.P. Sales Larry Williams, Quality Control Lenny Chirpion, Chemist

PURPOSE: To explore Cook's renewed interest in RG 244.

DISCUSSION: In February, at the SPI Conference in Wash. D.C, Clark Nies told me that Cook Paint was too busy and would not work on reformulations using RG 244. This was after he had earlier told me he would like to run some drum trials at their plant in Milpitas, Calif. Clark has since left the company and formed his own polyester operation called Co-Plas, in the vicinity of Ft. Smith, Ark. Recent developments in the market place and within Cook's competitive areas have indicated that RG 244 has the capacity to do for them what Cab-O-Sil cannot. The prime areas of interest at this time are the use of RG 244 in Gel Coats.

They have several formulations ready to go but must first satisfy themselves and protect their customers on certain potential problems;

1. EPA regulations, Cook agrees they must register, their concern however is whether or not their customers who are primarily polyester shower stall & boat manufacturers and who in the grinding & sanding operation may emit asbestos particles to the ambient air must register also?.

2. OSHA regulations, regarding the same example outlined above, if free asbestos fibers are released, must Cook's customers label their product as containing asbestos?.
