By J. E. Walsh

Date 5/14/74

Full Name	Marco Chemical Company	Interviewed	
Address	Orlando, Florida		Jim Russell, Manager
Mfrs. of	Polyester resins		

Call made on this redistribution point of our distributor of RG grades.

Jim advised that all was well with 244 and they had been making some good breakthroughs with it which has increased their consumption to about 50% re than they were reselling last year at this time. It would probably have en even greater he said if resin were more readily available. The two most recent breakthroughs were at Corvette World, a huge supply and repair house for Corvette automobiles and at the Kennedy Space Center for the mockup of the orbiting lunar laboratory. Application is in patch work while the work at Kennedy is hand lay-up. Both the fiberglass boat manufacturers and repair companies are beginning to us a bag here and there as they are finding that in patch work it is great for matching as opposed to our brand X competition which affects the color of the putty mix. Jim no longer bothers to sample prospects any more as the results he has seen along with the favorable feedback he has gotten has made him a true 244 believer. All's quiet on the health topic as he hasn't been asked a question about it in over 7 months.

JW Continue to stop in when in Orlando.
