Dr. Duane F. Hyde
620 Broadway
King City, Calif.

Dear Dr. Hyde:

Mr. Brown of the Industrial Relations Department of Union Carbide Nuclear Company was in to see you recently. He informs me that you had some preliminary discussions in respect to having pre-employment examinations done at the clinic.

I am expecting to make a trip to California early in July and would like to drop in and see you and Dr. Andrus regarding these examinations. We shall want a flat 14 x 17 chest x-ray on each applicant and a limited amount of laboratory work. Attached are some record forms which we can supply for these examinations. You will note there is a Medical History which is used for the initial examination and one for use when the same individual is re-examined.

Please let me know if July 9 would be a satisfactory time to see you.

Sincerely yours,

MEDICAL DIRECTOR

Mr. K. W. Lentz, King City
Mr. L. B. Emlet, NYO
Mr. C.E.Brown, NYO

Dear Mr. McPeek:

We are sending under separate cover some Medical Record Forms and copies of our Policy & Procedure for Medical Service to Employees. Will you please hold these until I arrive on July 9.

I have an appointment to visit Dr. Andrews of the Southern Monterey County Medical Group on July 9.

As you know, we will be processing asbestos in the new plant and expect there will not be an excessive exposure to the dust. Nevertheless, in interviewing prospective employees it would seem advisable not to hire men for work in the plant who have had a history of hard rock mining. Such workers have been exposed to silica dust in such work. Will discuss this further when I see you.

Warm personal regards.

Sincerely,

Thomas W. Nale

Indl. Medicine & Toxicology

Mr. K. W. Lentz King City
Mr. P. W. McDaniel NY

Dear Dr. Andrus:

I trust that you found Mr. McDaniel helpful in his talk to your group at their breakfast meeting recently in King City and I hope that at some time one of our medical men can give the medical side of the picture of environmental health.

I understand there has been some discussion relative to the measurement of blood cholinesterase in men exposed to certain of the insecticide formulations in your area. I am enclosing a copy of "Measurement of Blood Cholinesterase" which is a reprint from ARCHIVES OF ENVIRONMENTAL HEALTH April 1963 Vol. 6, pp. 537-563. I trust you will find this useful.

Very truly yours
