Gentlemen:

During July and August of this year, we plan to carry out an occupational health survey of the entire asbestos mining industry in California. To this end, we will contact you personally during early July in order to answer any questions you may have, and to set a date for our study of your facilities.

Very briefly, our study plan is to evaluate air-borne dust concentrations and ventilation air flow rates. In addition, we will want to obtain sputum samples from certain exposed personnel and review with you your preventive medical program.

The results of this work will be summarized in a report covering California's asbestos mining industry without identifying individual firms. In addition, we will provide you with the results of our evaluation of your facility and of your preventive medical program.

Our purpose in undertaking this study is to insure that workers in the industry are not exposed to harmful levels of asbestos dust, and that you are provided with up-to-date information regarding effective preventive medical programs. We know that you are as interested in this matter as we are, and we look forward to a pleasant working relationship.

Very truly yours,

Thomas H. Milby

Thomas H. Milby, M.D., Chief
Bureau of Occupational Health
