Dear Paul:

Enclosed is a copy of an article from the San Francisco Chronicle re mesothelioma and asbestos. I would be interested in your reaction. Is 5 MMPCF still considered good enough, or should we go to remote-controlled equipment and air-line masks like the nuclear industry uses? I've seen one article which implies that crocidolite may be the harmful variety rather than chrysotile. Have you anything on comparative toxicology of various species of asbestos?

Very truly yours,

JAR

THIS IS A SENSATIONALIZED NEWSPAPER STORY, NOT NECESSARILY TRUE.
WE ARE, HOWEVER, CHECKING IT WITH THE CORPORATION MEDICAL DEPT. TO SEE IF THEY HAVE ANY INFORMATION, AND WILL KEEP YOU INFORMED.

JOHN
