Subject: Molding Material Minutes
January 10, 1974

1. One Step Molding Material
Activities related to one steps have been stopped with the decision to withdraw from the market. We anticipate supplying at 60% level for the first quarter to allow time for customers to find alternate supplies.

2. Asbestos Replacement Program
(a) Manufacturing has prepared a report recommending to the business team that the replacement of Carey Asbestos with Union Carbide Calidria asbestos for heat resistant and impact materials be stopped. Higher formulation costs and additional investment for the calidria material as compared to original estimates were the basis of the recommendation.
P. B. Potter has prepared a supporting letter identifying the market needs for asbestos filled materials.
(b) Status of General Purpose Materials
The replacement of asbestos in the general purpose materials will continue as planned.
(1) 5314 - During next scheduled run 2 truckloads of asbestos free material will be made for Square D.
(2) 5440 - There was no progress on this material due to holidays. P. B. Potter will follow-up prior to our next scheduled run.
(3) 7950 - P. B. Potter reported that there was no problem in the field with reduced levels of asbestos. Asbestos will be eliminated from the formula.
(c) Heat Resistant Materials
(1) 6935 - Additional work will be held pending response from the business team on recommendation to cancel program.

3. Automotive Specifications
(a) 5310 - Ford Motor Spec. - As we can not meet the Kurz Kasch and Ford requirements, Marketing has decided to withdraw from this application.
