Asbestos Appl'ns - paints

June 18, 1975

Mr. R. E. Chamberlin
Technical Director
Mobil Chemical Company
P. O. Box 250
Edison, NJ 08817

Dear Mr. Chamberlin:

In April, you sent us three samples of the liquid portion of commercially available ethyl silicate zinc primers for us to analyze for asbestos content. For several reasons, both technical and mechanical, the report on this work was not made available until this week. For this delay, we apologize.

The sample identified as 11107-B does not evidence the presence of any asbestos and is not included in the attached bound report. Sample 11107-C (our designation: 2034-73-2(c)) showed kaolinite as the primary mineral constituent with the possibility of some anthophyllite being present. Sample 11107-D (2034-73-3(d)) contained anthophyllite plus several other minerals as has been reported. None of the samples contained chrysotile (asbestos) as far as could be determined.

Again our apology for the inordinate delay in reporting this work to you.

Very truly yours,

Gordon L. Dickson
