Subject Pigmented Asbestos-Containing Systems
D-8093

This summarizes the conclusions reached at our recent meeting at Niagara Falls on the above-noted subject.

1. Mr. McCarthy will review Docket 8093 and advise us whether it can be used to cover the separate slurry technique starting with filter cake as described in R. W. Lasher's Technical Service Report of September 8, 1970. The same kind of review will be made re the separate slurry technique starting with titanated asbestos pellets. The results of these reviews will serve as a guide for additional applications if appropriate.

2. We will supply Mr. McCarthy with a list of the foreign countries wherein applications are desired. He will advise us on the kind of coverage we may be able to obtain in each.

3. We will continue in the laboratory to look for additional points of criticality relative to the use of asbestos in latex paint.
