Date 11-13-75

Full Name Bruning Paint	Interviewed
Address Pompano Beach, Florida	Bob Walters, V.P. and General Mgr.
Mfrs. of Protective Coatings	

Call made on RG-244 prospect from our mailing list with T. R. Holliger of the coatings sales force.

As soon as I mentioned the magic word "asbestos," this call turned into a straight discussion of toxicology and the OSHA regulations. Like a lot of non-asbestos users in the paint industry who have only heard the other side of the story and assorted rumors, Walters was under the impression that asbestos usage in the paint industry was banned. Explained the soup to nuts story on toxicology and the regulations, and at least ended up with another better informed account in the paint industry. Bruning is a 100% trade sales paint manufacturer at this location and have never used asbestos, silica, or Bentone.

HBR Walters claims that he received a certification from Vanderbilt that the asbestos-containing talc was exempt from the regulations. He couldn't lay his hands on it, but felt pretty sure that the exemption was for both the OSHA and EPA regulations. Advised that to the best of my knowledge talcs that contain Tremolite were exempt under the EPA regulation only. Do the talc people have an OSHA exemption, too?

JEW No further calls needed here unless we hear from them.
