UNION CARBIDE

INTERNAL CORRESPONDENCE

PLAINTIFF'S EXHIBIT UC-783

METALS DIVISION

270 PARK AVENUE, NEW YORK, NEW YORK 10017

To (Name) Mr. R.G. Woolery
Division Metals Division
Location Niagara Falls, N.Y.
Floor Number

Copy to Mr. P.F. Decker

Date April 21, 1977
Originating Dept. TUVA
Floor Number 38th
Answering letter date

Subject Silane-treated RG-244

Per our conversation, please proceed to tidy up a few loose ends with respect to the silane-treated RG-244. This work, which should use COF-25 as the base material, includes:

1) Determining the effect of various silane loadings at various additive levels (i.e. 7, 11, & 14 #1bbl) on the apparent viscosity;

2) Having Toogie Foster check the stability of a few selected compositions from step 1 above;

3) Pressing our patent application.

Our objective should be to produce optimized material in laboratory quantities for evaluation by firms such as Dresser and Montello at the earliest possible date. These laboratory studies should leave us on a position to immediately produce the best formulation at King City.
