Dear Sir:

A Safety Order on Asbestos has been added to Article 110 of the General Industry Safety Orders issued by the State of California, Department of Industrial Relations. I am enclosing a copy of the order in case you have not seen it.

We are required to meet the regulations and you will be subject to them while contracting work for us. In the case of mining, we have no background of air borne fiber concentrations during the mining operation. Samples will be taken during the operation this year to give us this information.

Our operators are required to wear respirators at the mine area while screening ore, and, as a very minimum, any contractor employees who are operating in dusty areas will have to use respirators per the regulations until air-borne quantities of fiber can be determined.

I am enclosing a number of booklets, published by Johns-Manville for your use if desired. We have handed these booklets out to our employees as a means of employee education in view of the adverse publicity concerning asbestos in the last 2-3 years.

Very truly yours,

Floyd H. Larrison, Jr.
Manager-King City Operations
